QOALA DEVOPS ASSIGNMENT

Report summarizing errors encountered during image building, container setup or application testing.

1) There were numerous typological errors(spelling mistakes) in the dockerfiles, Docker compose file and nginx.conf. Along with this the paths of various files were written wrong.
   RESOLUTION:
   Corrected all the typological errors and syntax errors and gave correct paths of all files.

2) Encountered and error in nginx/Dockerfile related to COPY statement consisting HTML page while building the local-nginx image.
   RESOLUTION:
   Created a sample index.html file in a HTML sub-folder inside nginx folder to and gave its correct path in the COPY command of Dockerfile to avoid the error.

3) While running the "docker-compose up -d" command faced an "absolete version warning".
   RESOLUTION:
   Removed the "version" from "docker-compose.yaml" file.

4) Session timed out again and again in the EC2 instance application when I closed my Powershell.
   RESOLUTION:
   Created containers in detatched mode using "-d" so that they still run in the background without being disturbed.
